Title: Transportation in IIT

Project 2 by **Pooja Masurkar**Roll No.136250014
Visual Communication

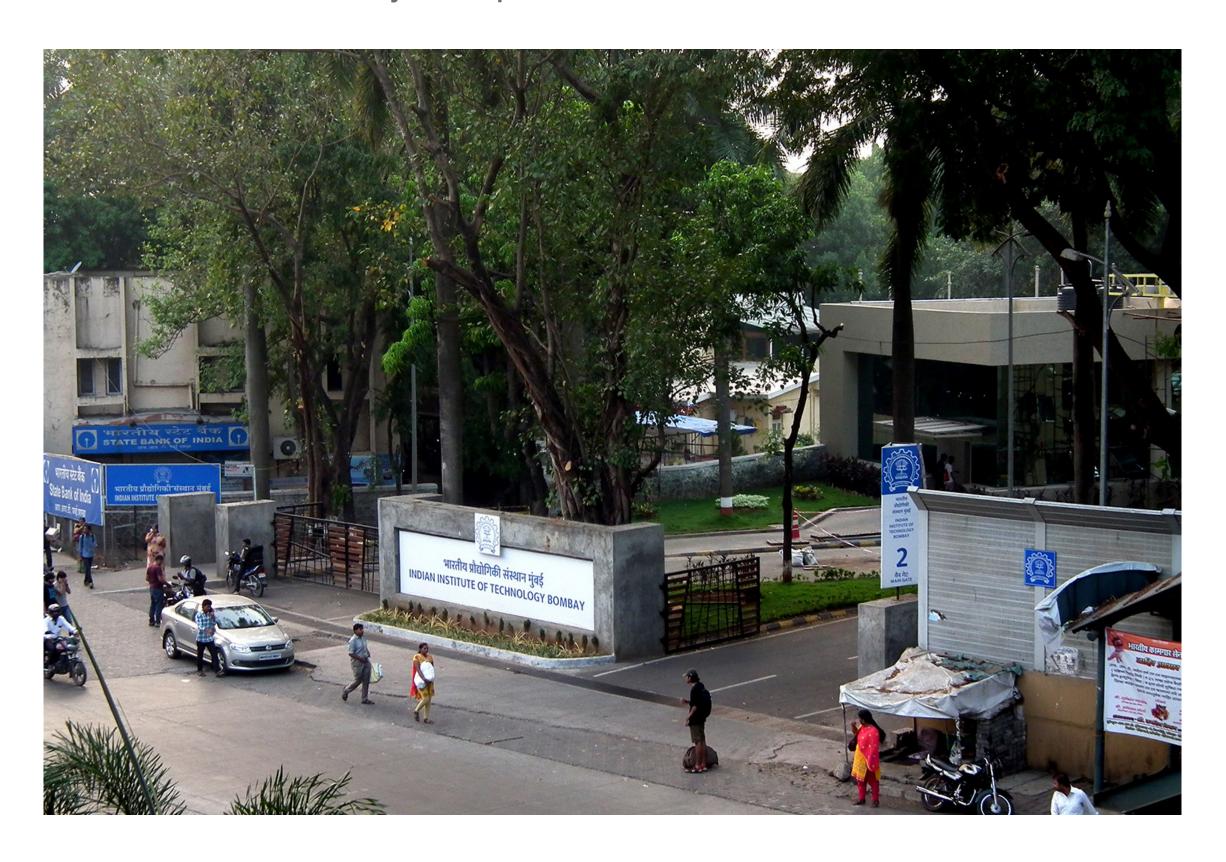

Guided by Prof. Sudesh Balan

PROJECT

Redesigning the user interface of the existing transportation service website of the campus.

Within the IIT Bombay Campus

Scenario

Area of the campus: 2.2257 km²

Mode of travel to commute is as follows:

Walking

Cycles

Bus services provided by the institute

Auto Rickshaws

Bus services provided by the institute

Private Vehicles - Bikes

Cars

Public transport vehicles from outside the campus

Problem

Lack of organised and analysed dissemination of information regarding

Precise timings of bus services.

Accurate directions of quickest routes to various destinations.

Clear instructions to various destinations.

Local news.

Solution

A digitised platform that can be accessed by the target audience which provides

Precise timings of bus services.

Accurate directions of quickest routes to various destinations.

Clear instructions to various destinations.

Dedicated social networking platform which provides immediate updates.

Local weather information.

Process followed

Analysis of data that gives simplified information to the user

Calculations

Buses - Average speed, number of buses, bus routes, locating bus stops.

Cars - Average speed.

Walking - Average speed, tracing pedestrian paths.

Locations - Calculating fixed points on the map.

Routes - Calculating accurate junctions and routes of the campus.

Outside the IIT Bombay Campus

OUTSIDE THE IIT BOMBAY CAMPUS

Implementation of the project on a wider scale

Analysis of data that gives simplified information to the user

India is a developing economy witnessing rapidly growing cities. Public transit systems are playing a major role in commute. Eg. Monorail, Metrorail, Railways, Buses, Share Autos, Prepaid taxis, etc.

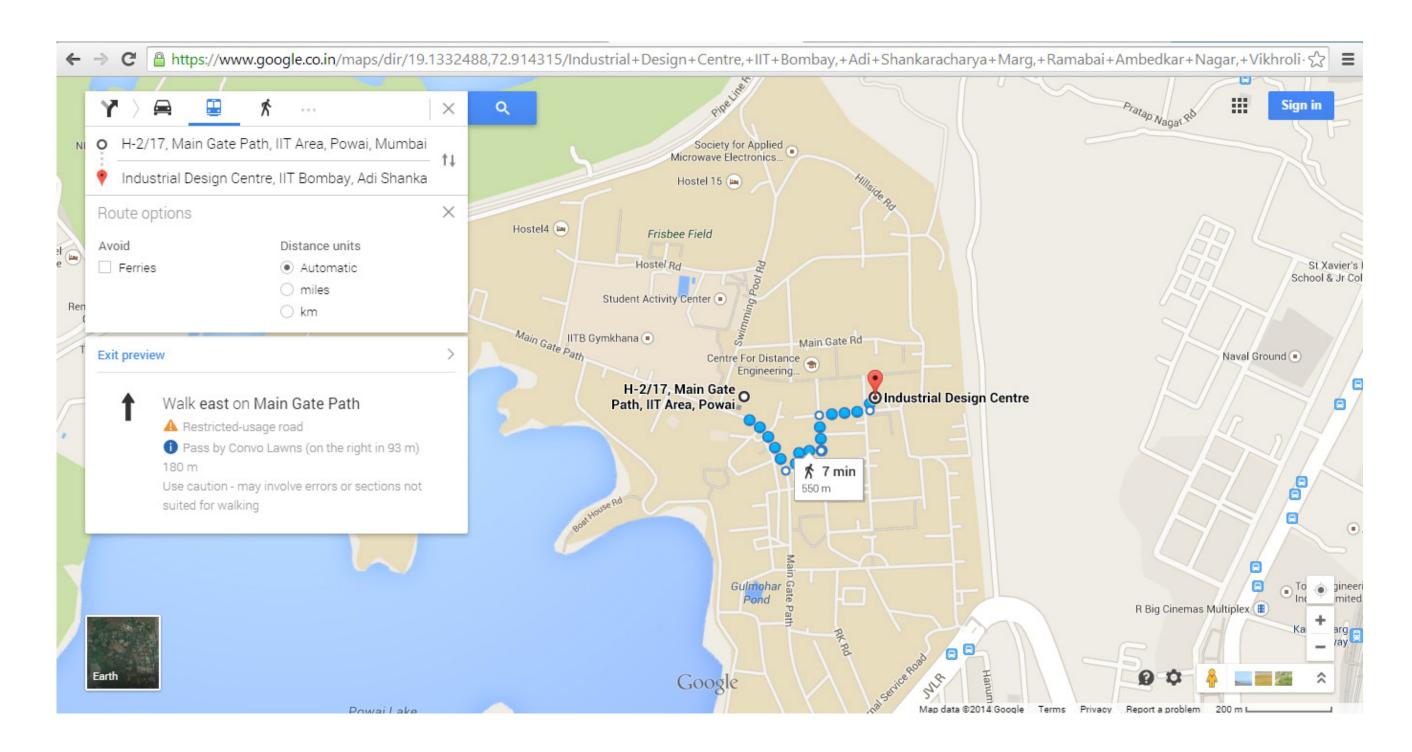

Many locations are not traced accurately in current map solutions.

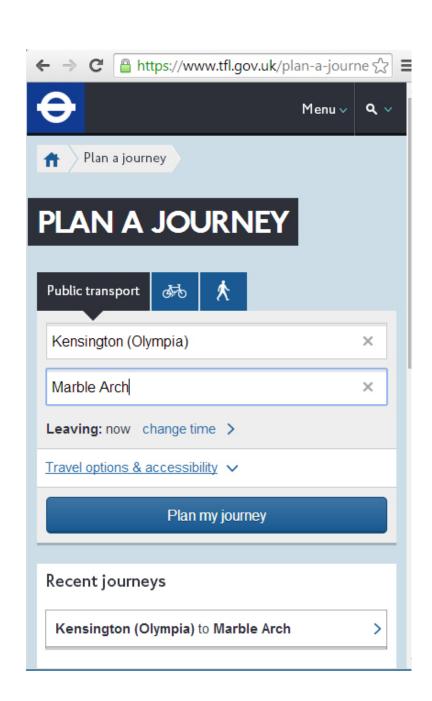

Hence, the network of urban transportation systems is complex where collected data can be analysed to give accessible information to the commuters.

Highlights of the websites

Responsive web design principles: enables a viewing experience to the user that is optimised across all devices such that the screen size and its contents is adapted proportionately to technical requirements of each.

Responsive type: The typography resizes and realigns to the variable screen sizes enabling easier reading.

Fluid inline images: The images embedded in the content, resize proportionately to the screen sizes according to set percentages.

Responsive layouts: The grids and columns of the screen realign according to the variable screen sizes.

Responsive navigation: The navigation adapts its to the various screen sizes such that it is easy for the user to sort the menu sequentially.

Responsive menu bars: The menu bars resize optimally such that user is able read the text on menu bars and navigate easily through minimum clicks.

Blurred background image: Blurred photographs reduces the overall size of the website while loading the image.

Hamburger menu style: It is symbolic icon to depict a classic menu when clicked.

Modern User interface: The characteristics of a modern user interface are minimal visual clutter, simple navigation with least number of clicks, high clarity photographs that are optimised to load in least amount of time, organised data and clear sequential flow of information.

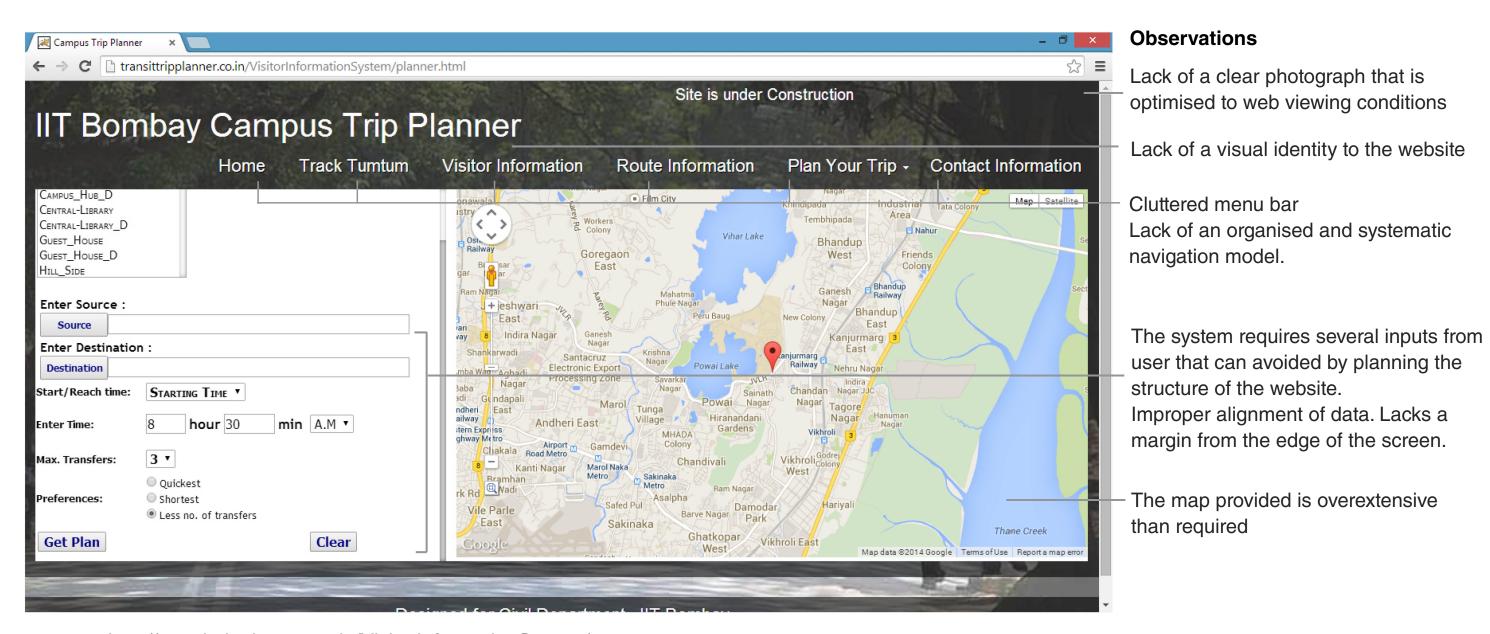

Technical Specifications - Responsive Design

EXISTING INTERFACE

designed by Department of Civil Engineering, IIT Bombay

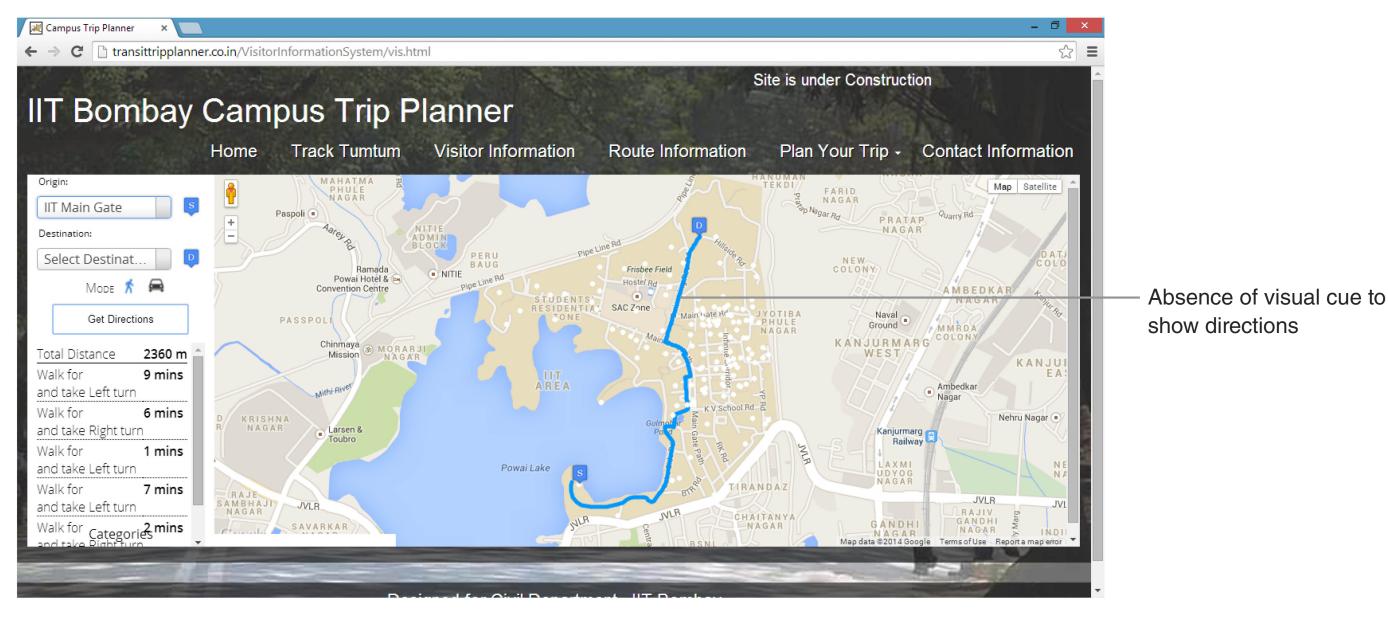

Courtesy: http://transittripplanner.co.in/VisitorInformationSystem/

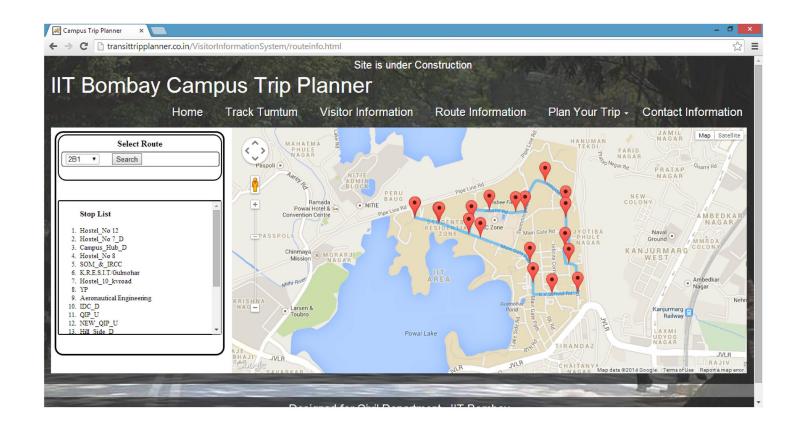

Courtesy: http://transittripplanner.co.in/VisitorInformationSystem/

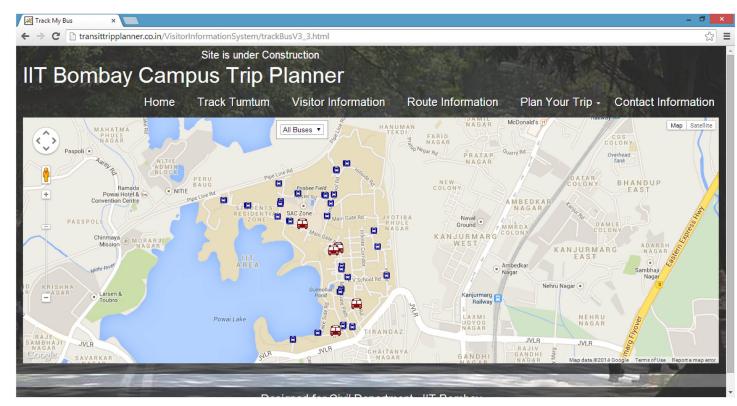

Observations

Out of context sentences can be

Courtesy: http://transittripplanner.co.in/VisitorInformationSystem/

Courtesy: http://transittripplanner.co.in/VisitorInformationSystem/

Observations

Unnecessary display of information such as bus stops and live bus tracking information. Such data can be hidden from the user to avoid clutter and enhance the visual experience of the user without overloading information to the user.

WEBSITE

Final Project

Objective

Person travels from point A to point B in minimum time within the IIT Bombay campus.

Target Audience

- 1. Students
- 2. Staff
- 3. Faculty
- 4. Residents
- 5. Visitors

The prerequisite is that the above users must have access to a smartphone / deskstop computer / tablet with an internet connection.

Technical Prerequisites

- 1. Responsive design
- 2. Internet connection
- 3. Additional hardware
 - i) GPS (Global Positioning System) co-ordinate locator
 - ii) Touch screen input
- 4. Devices and Operating Systems
 - i) Mobile iOS, Android, Windows, Blackberry
 - ii) Tablet iOS, Android, Windows
 - iii) Desktop Computer Mac, Windows, Ubuntu
