Design of Bamboo Sliver Furniture

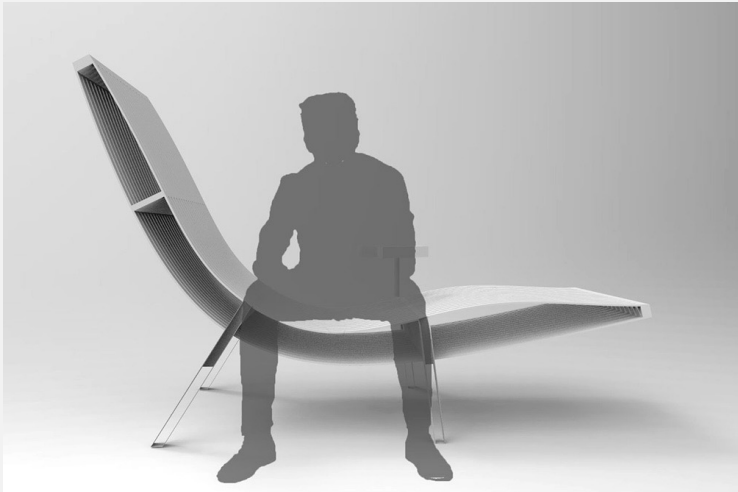
Case Study:

Design of **Bamboo Sliver Furniture**

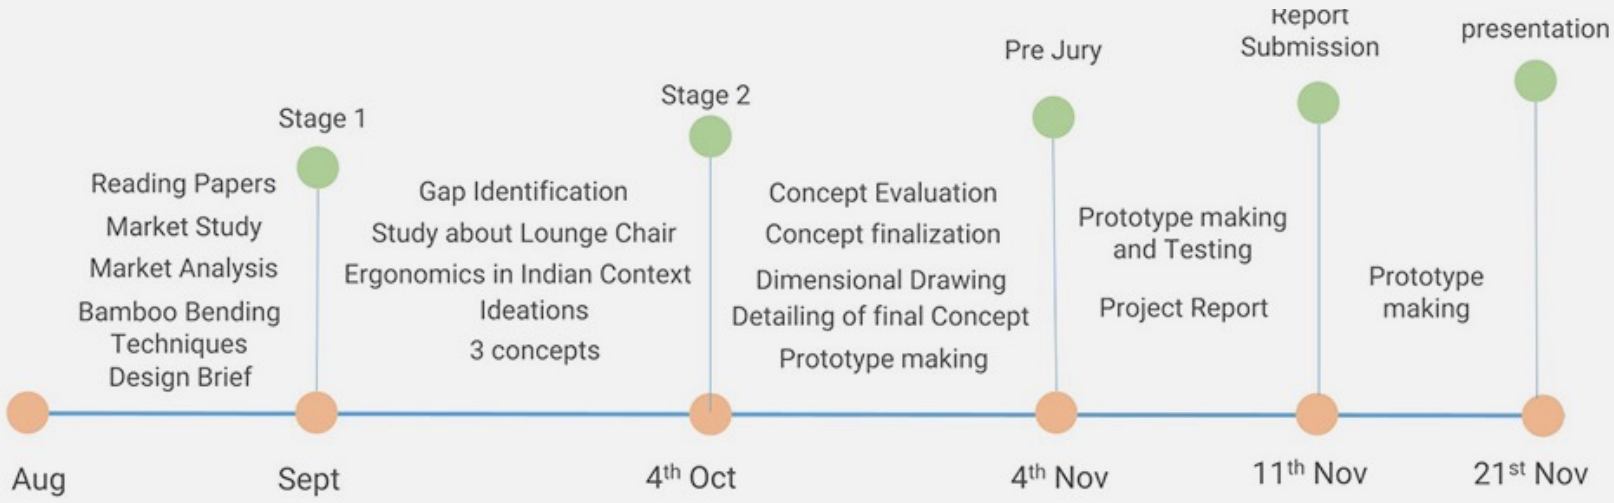
- Using natural material for a lounge chair

by
Sumit Ranjan Kumar (MDes students)
and Prof. Avinash Shende (Mentor)

Content



DT&I Process Timeline:



Design Brief:

To design a lounge chair using bamboo slivers for the airports, where people can just sit and relax!

In Guwahati, Assam airport, They are promoting bamboo just by creating interior wall paneling to the pillars, which seems to be very less effective! whereas Madrid Airport in Spain shows a complete contrast of it.

Gap Identification and Opportunity

An opportunity to include bamboo material for sitting, so that people get to interact with it directly!

Key words: Bending, Flow, relax, inviting

Guwahati and Madrid Airport

Background Research: keywords

Bamboo as a new material for Design.

Background Research: Bamboo material properties

Bamboo is an excellent material for indoor and outdoor furniture's with the following properties:
- its light-weight structure,
- superior mechanical properties and
- natural resistance against biological attacks.

(Solomon-Ayeh 2002, Chele et al. 2012)

The **mechanical properties of bamboo veneers, stripes, strands, particles and fibers** are comparable and sometimes better to those generated from wood.

(Hidalgo 2003, Zehui 2007, Malanit et al. 2010)

https://graminno.org/bamboo-plantation-and-furniture-for-rural-sustainability/

Background Research: economic and environmental factors

Some of the economic and environmental advantages of bamboo:
- it **grows quick as a straight stem**.
- after drying, it is **resistant to swelling or shrinkage due to climate changes.**
- it is extremely **durable and resistant after some treatments for reservation.**

Bamboo seems like a **sustainable and environment-friendly material** for making **furniture**.

Bamboo Bending Techniques:

Steam Bending

Blow Bending

Hot Air Gun

Types of Lounge Chair:

Classic Lounge Chairs

Long chair, can stretch out completely on without to use an ottoman

Chaise Lounge

Long chair, can stretch out completely on without to use an ottoman

Club Chairs

Low back with deep seats. It also inspired the Eames lounge Chair

Recliners

Arm Chair with Recliner for better comfort

Poolside Loungers

Designed for outdoor uses

Grand Master's design:

Eames Lounge

Price: 4 Lacs

Le Corbusier's Lounge

Price: 2.9- 3 Lacs

Inferences:

Great curves and lines to admire the beauty!

Cushioned Seats given for better comfy

Fixed and adjustable inclination

Metal base structure

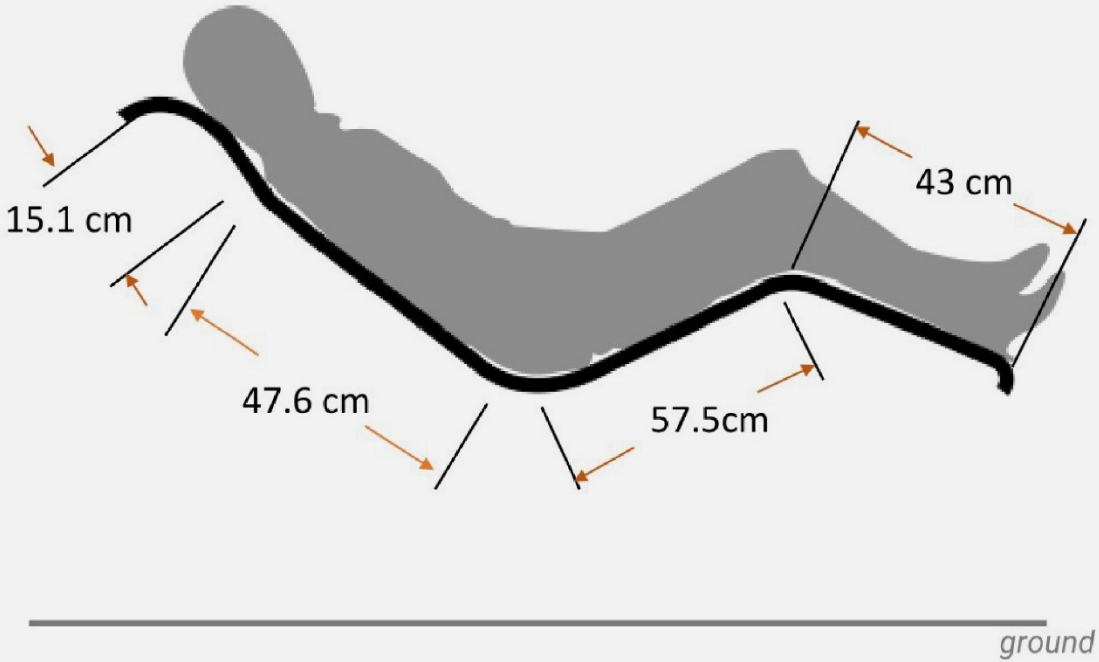
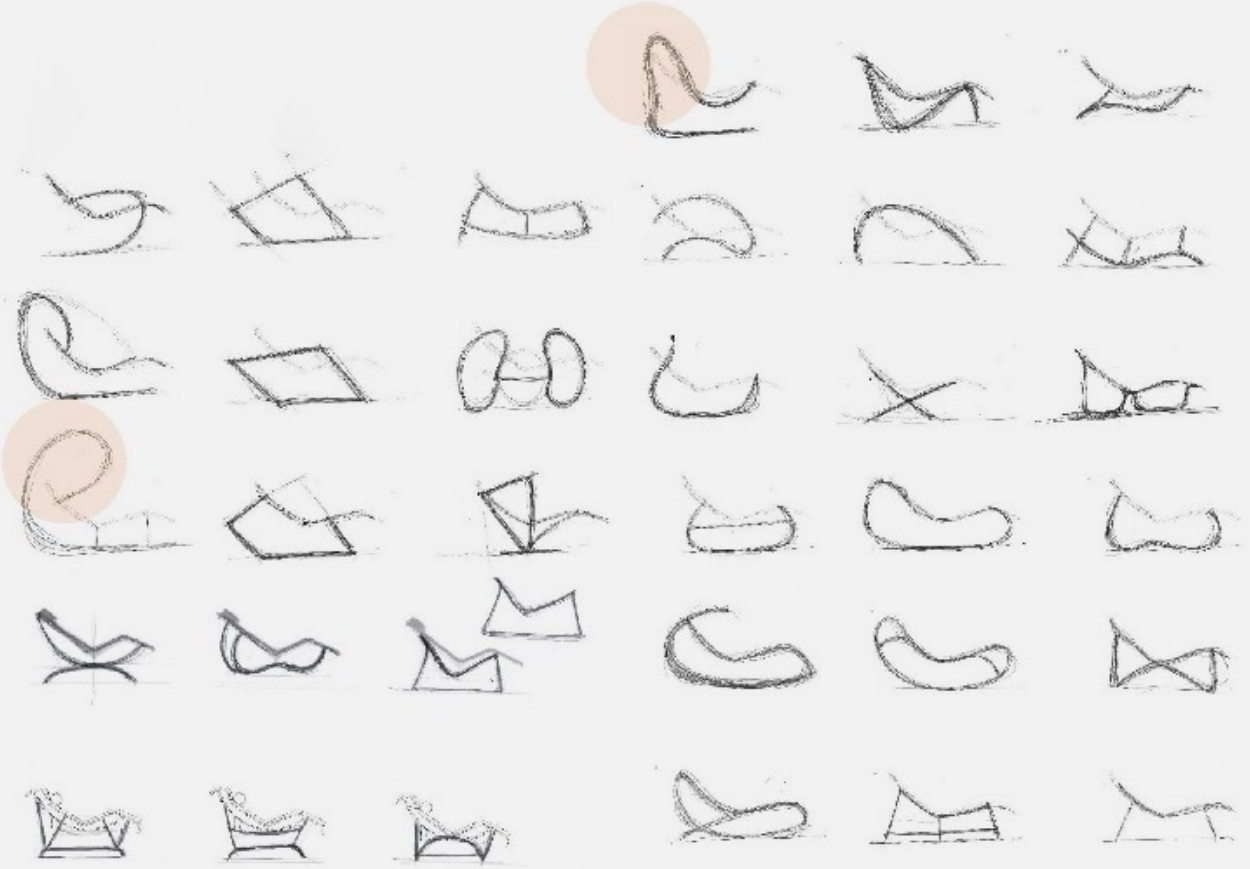
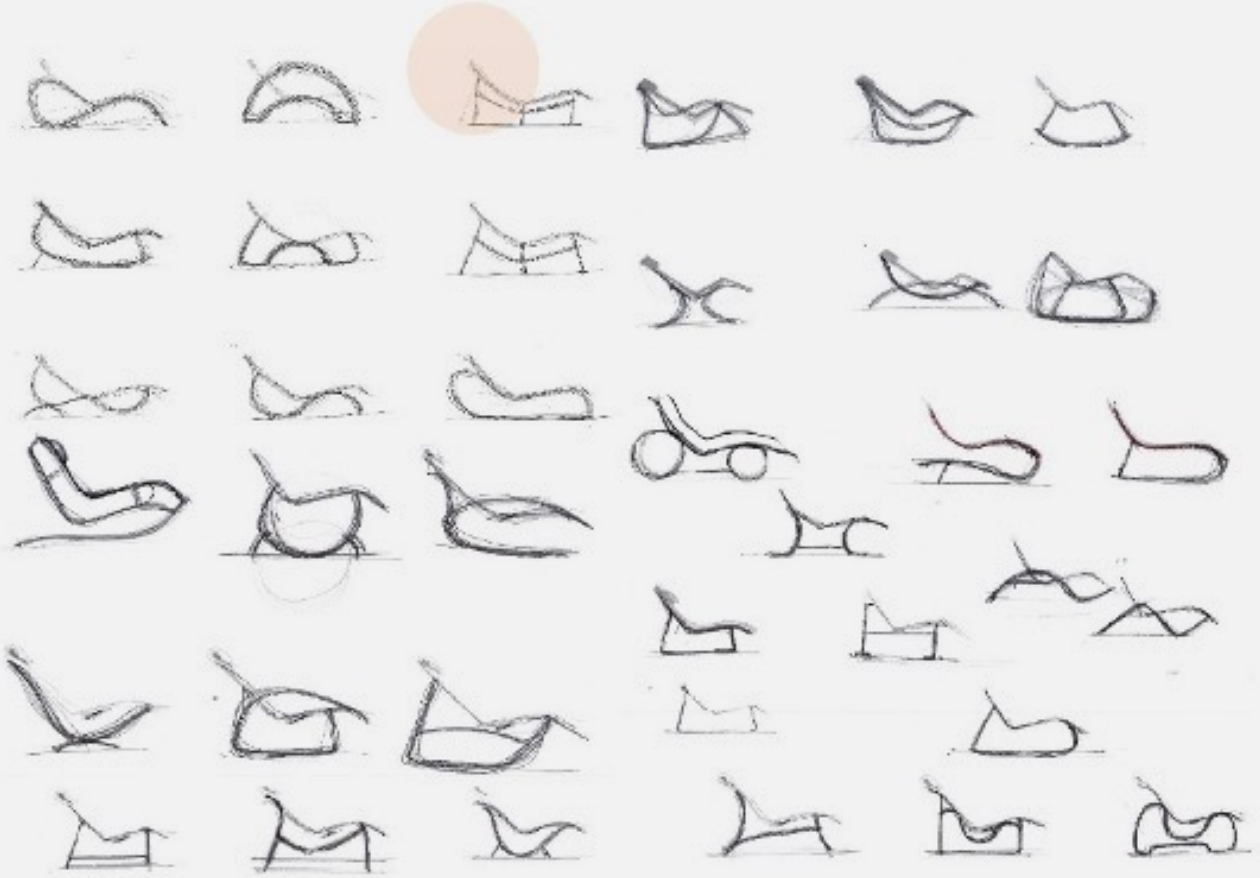
Ergonomics considerations as per Indian Standard:



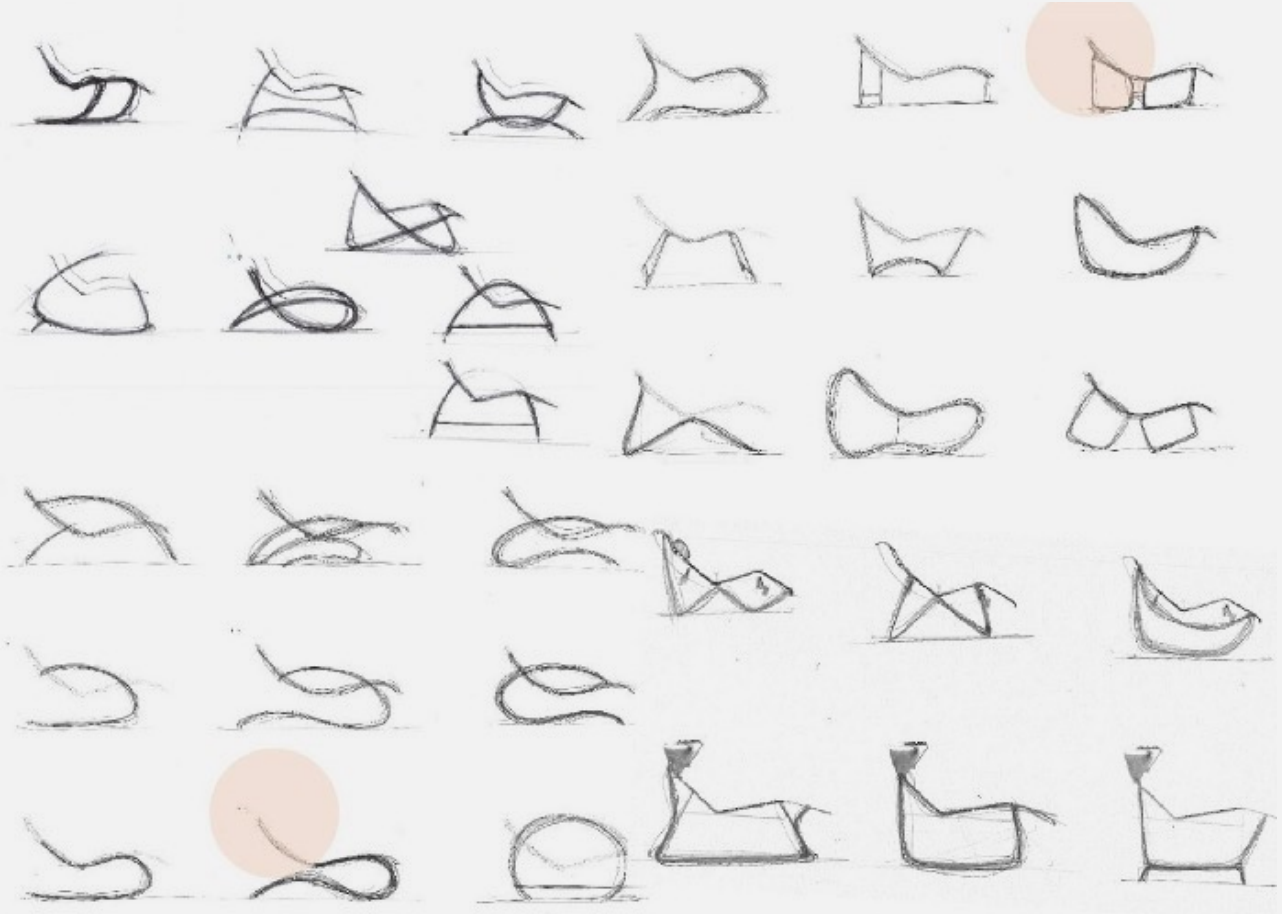
Ideations:



Further Ideations . . .



Further Ideations . . .



Concept 1: Alpha:

THINK!
DESIGN

This concept has continuity in its form that shouts out, so we worked upon it further. there are three repetitive strips on the both side that creates a spring mechanism while sitting, which can enhance the experience while lounging. we Also considered the activities which are done while lounging at the airport.

Concept 1: Alpha - prototyping:

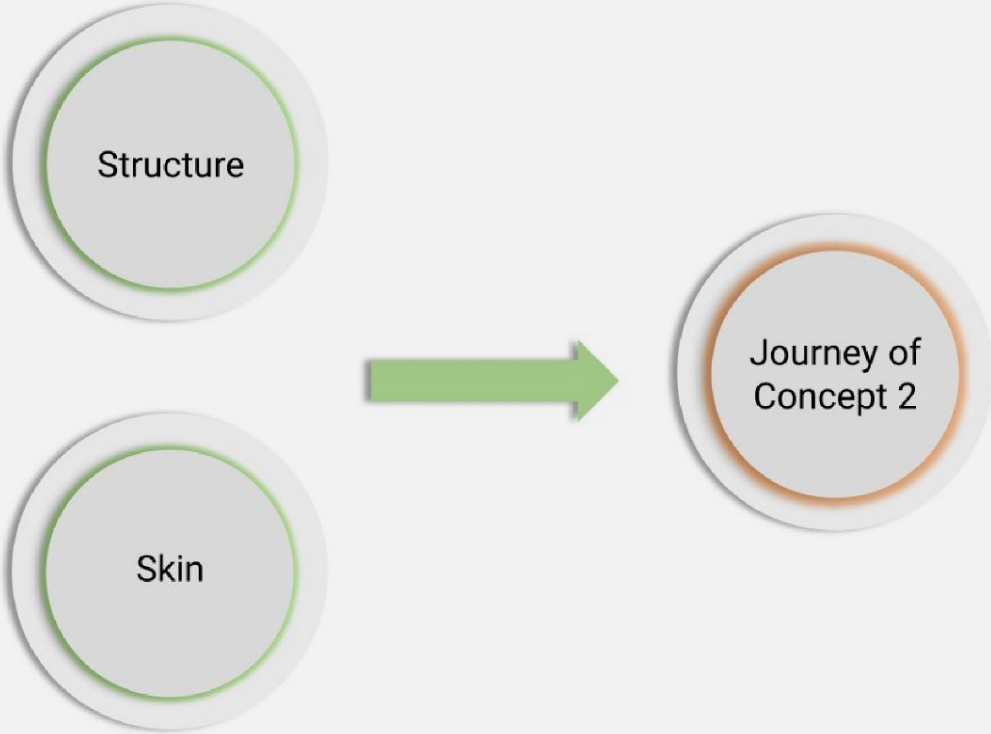
Prototype concept one was made at 1:1 scale and found that it is not sturdy enough and would not be able to support the human weight.

More insights from the failed prototype are: - A metallic frame would be needed to support the structure and person's weight.

Concept 2: Voronoi:

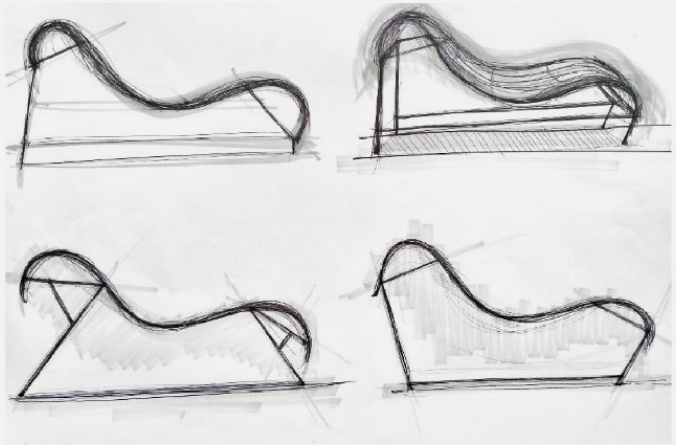
Voronoi Pattern

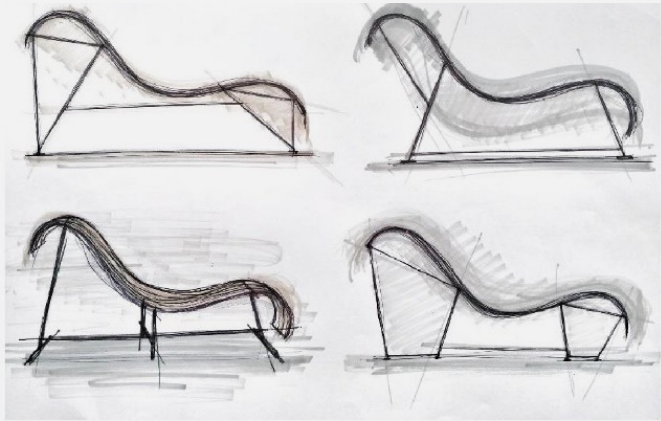
Journey to concept 3. . . . .

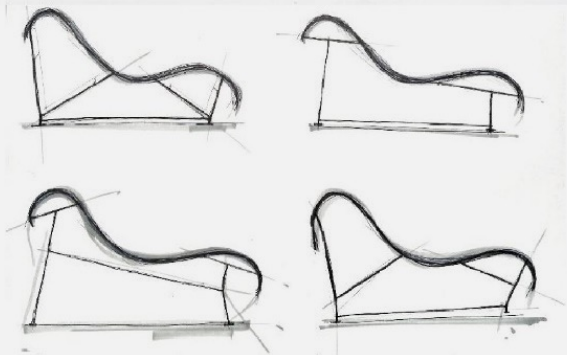


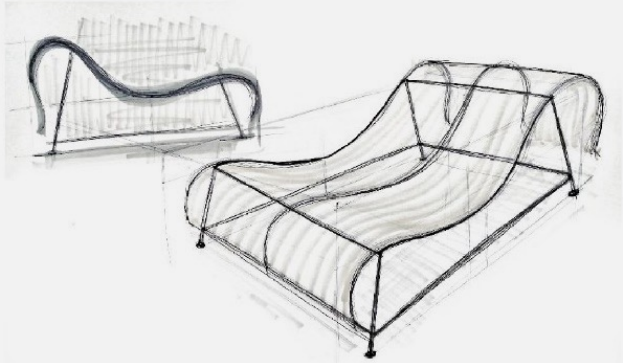
Further Ideations:

Ideations with the base structure as metal for stable using least structural elements.



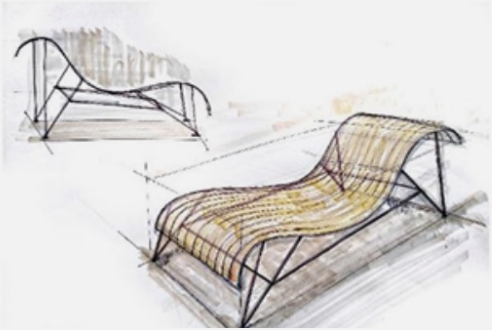




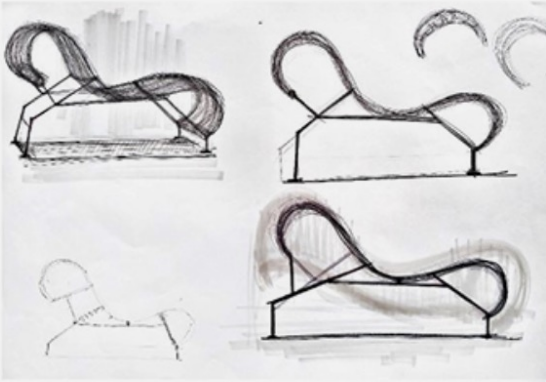


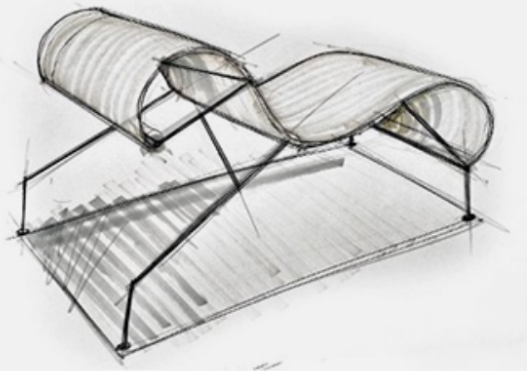
Further Ideations . . . .

Here, the base point of the structure is towards inside, which might create instability in the overall form.



Here, the base point of the structure is taken slightly outwards and the metallic element increased to create the balance

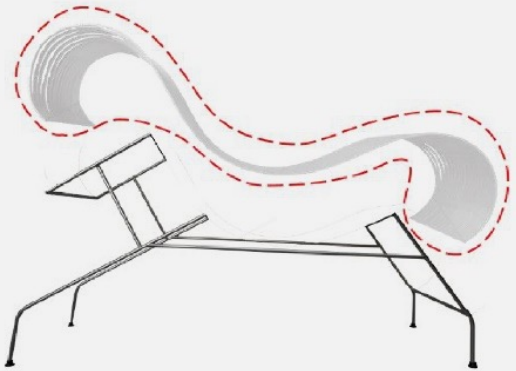




After playing with this idea, it started showing a horse form,

Further Ideations . . . .

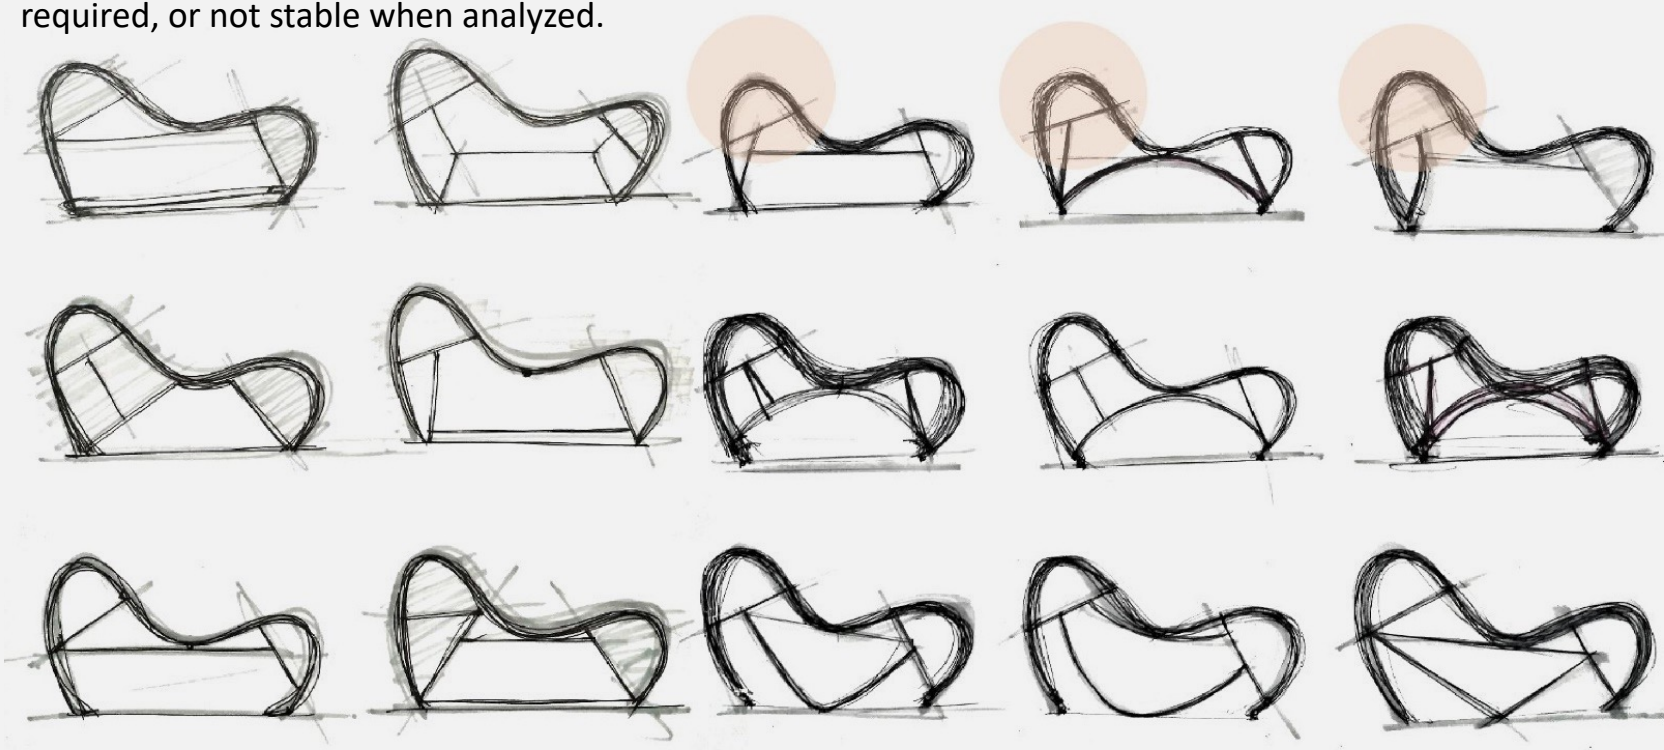
Paper Prototype
Scale 1:7



This idea was analyzed with the conclusion that the structural part dominates compared to the elements of Bamboo element. Further ideation evolved into spline concept.

Spline Concept:

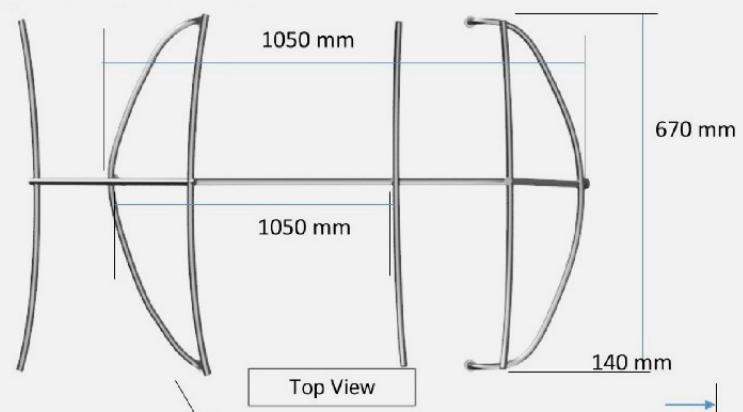
The highlighted ideas were taken further and worked upon, other ideas either dominate in structure, or have more elements than required, or not stable when analyzed.

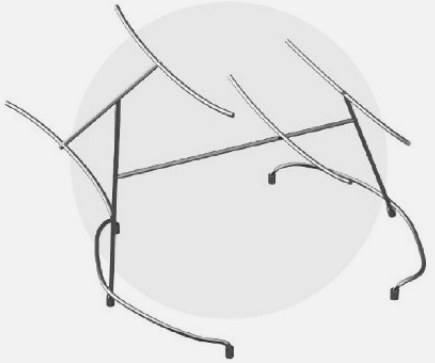


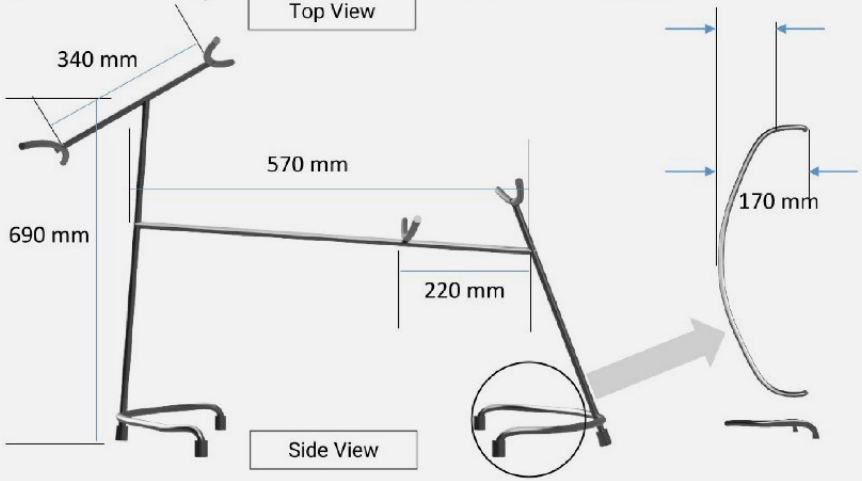
3D Explorations:

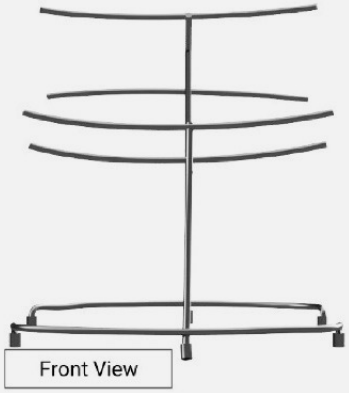
Paper model of Spline concept:

Detailed Dimensions:

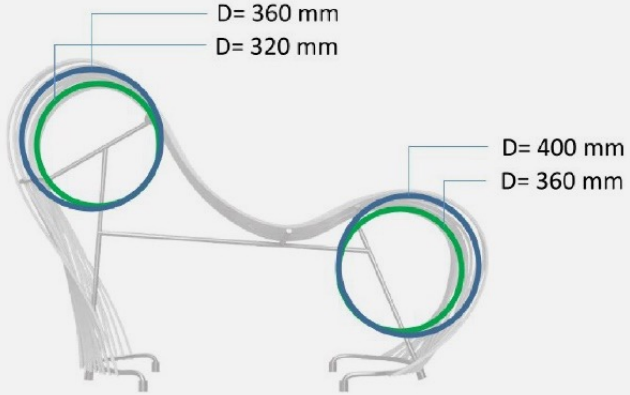


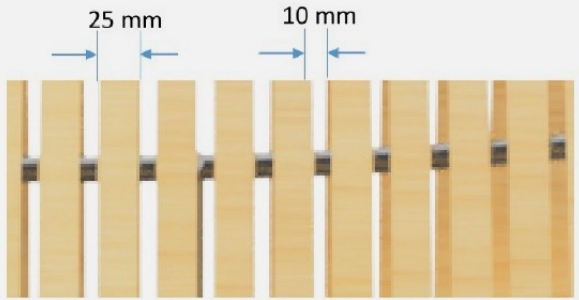






Cad Drawing with dimensions:





Spline Lounge – Design 1:

Manufacturing and Feedback:

Making the steel structure and trying it out.

Manufacturing and Feedback:

Bamboo Sliver making.

Bamboo slivers kept in water to make it softer for further treatment

Heating and bending

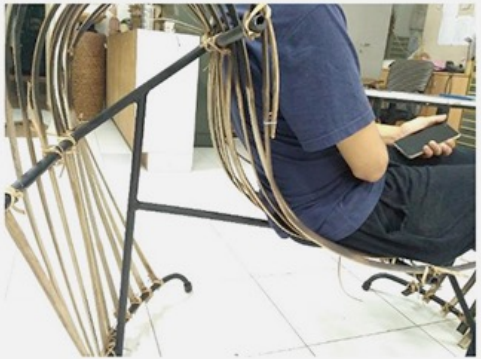
Bent slivers putting on frame

User Testing and Feedback:

Sitting Position1- the head part should be little up for better comfort, cushioning is a good option!

Sitting posture 3

Sitting posture 2



Gap to be filled by changing the sliver curve or some cushioning need to be provided

User Testing and Feedback:

Sitting Position

Resting Position

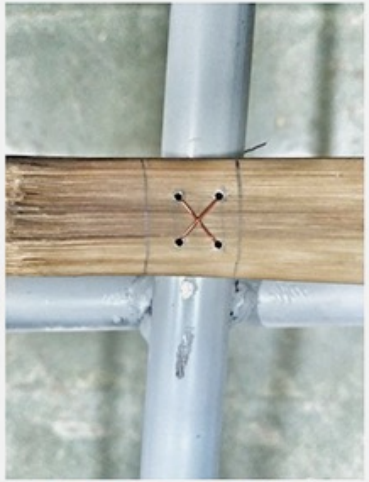
Required Ottoman position

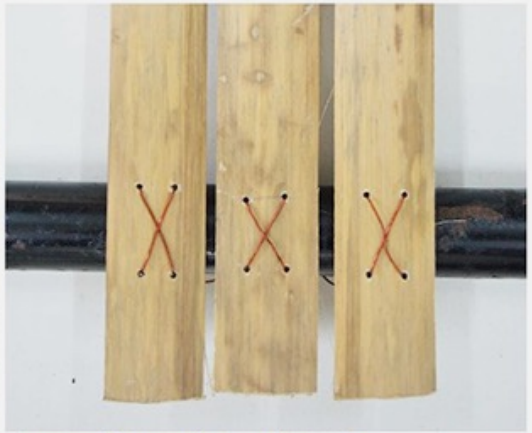
Feedback from user testing:

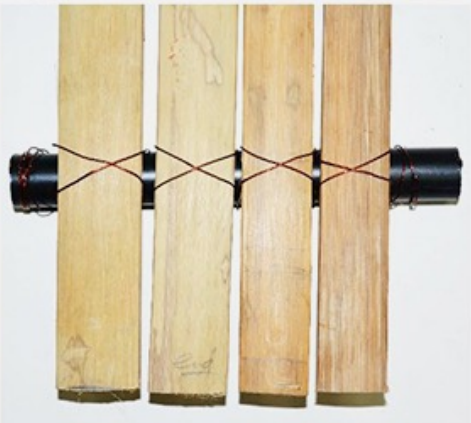
Head and back need cushioning
A Leg Rest/ Ottoman would be great!
Person can sit in various position as per the need

Study of Joinery details:

Joinery details – trying out options:







Joinery with holes in bamboo tied up is more strong and stays tightly at the position

Material and Manufacturing cost of a unit (BOM):

Material cost		Labor cost	Time Taken
Bamboo - 24 ft. Bamboo. - 20 slivers from 2 bamboo	400/-	MS Bending and welding- 400/-	Bending and welding- 4 Hrs.
MS Pipe - 50 Rs. Per meter	600/-	Bamboo Bending work (2 craftsmen) - 3000/-	Bamboo bending- 4 days (8 hrs.)

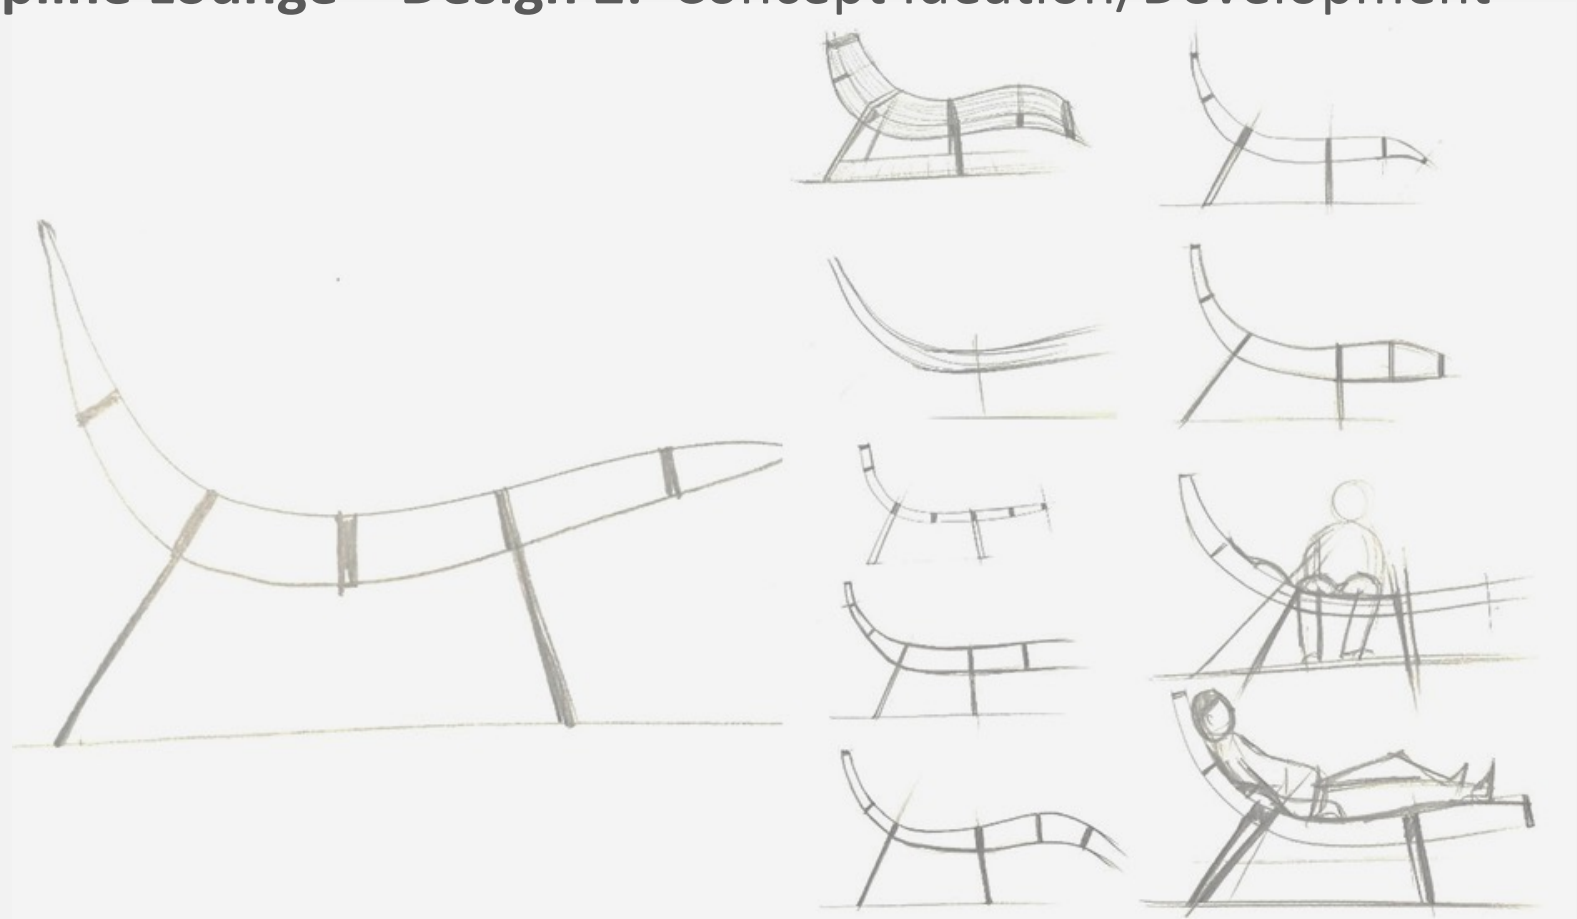
Total Cost = Rs 5000/-

Spline Lounge – Design 1: Manufacturing options

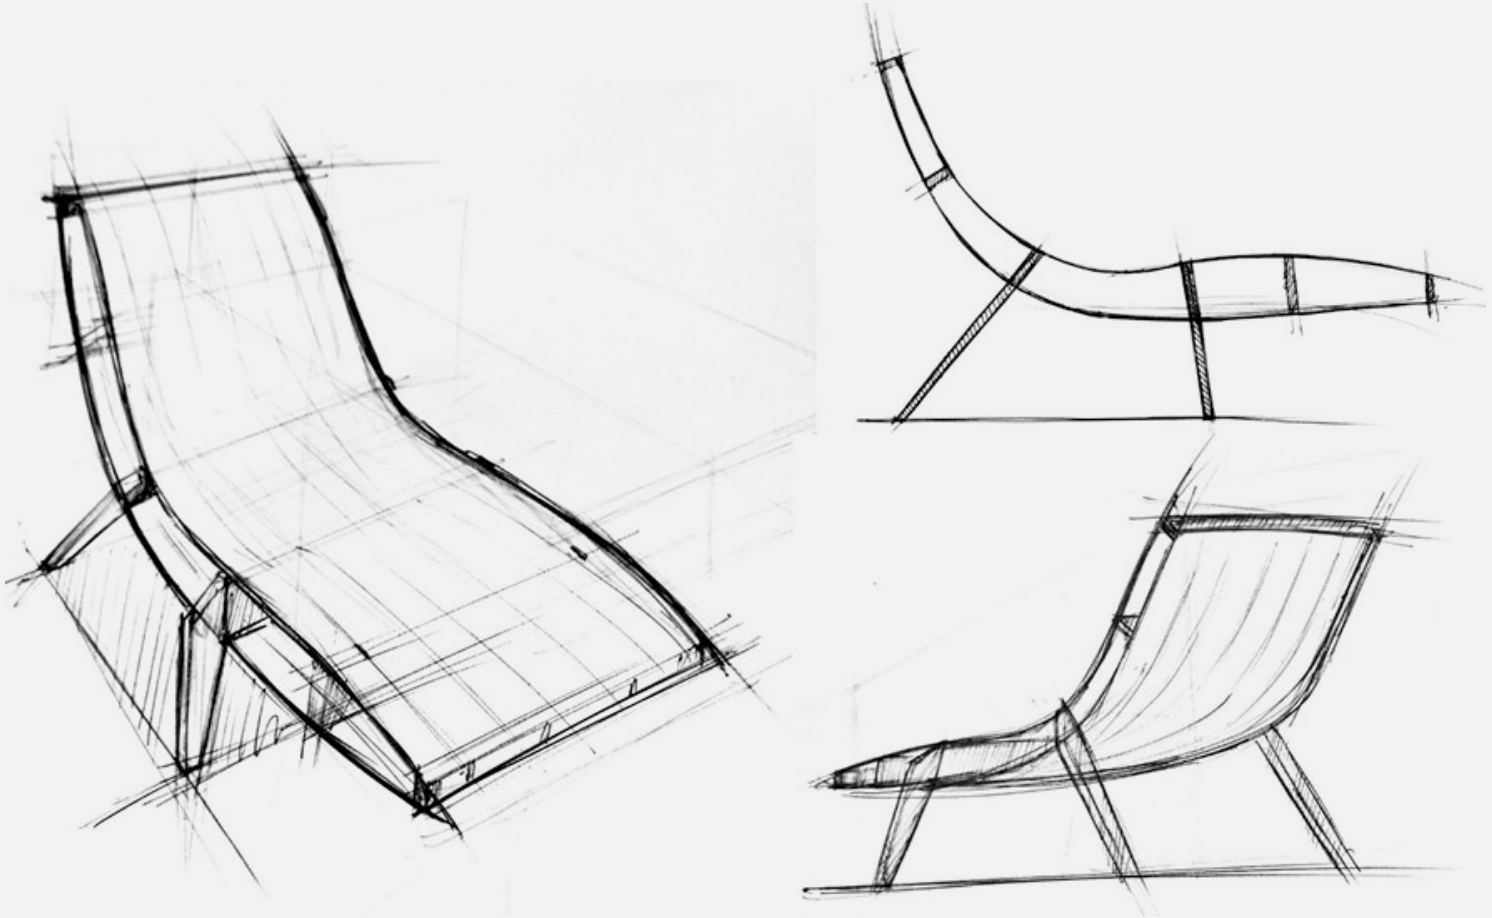
The spline design 1 lets entrepreneurs manufacture separately in parts as Bamboo and metal framework and merket this together as a combined final product.

Spline Lounge – Design 2: Inspirations

Spline Lounge – Design 2: Concept Ideation/Development

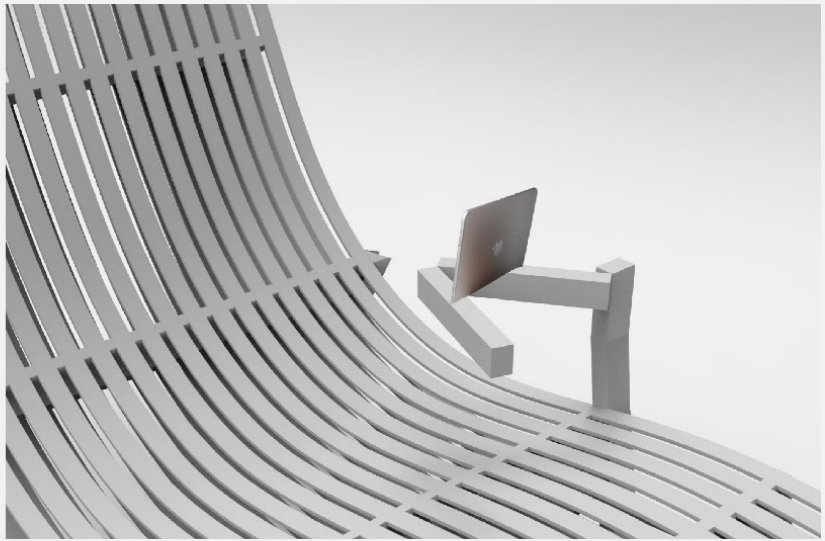


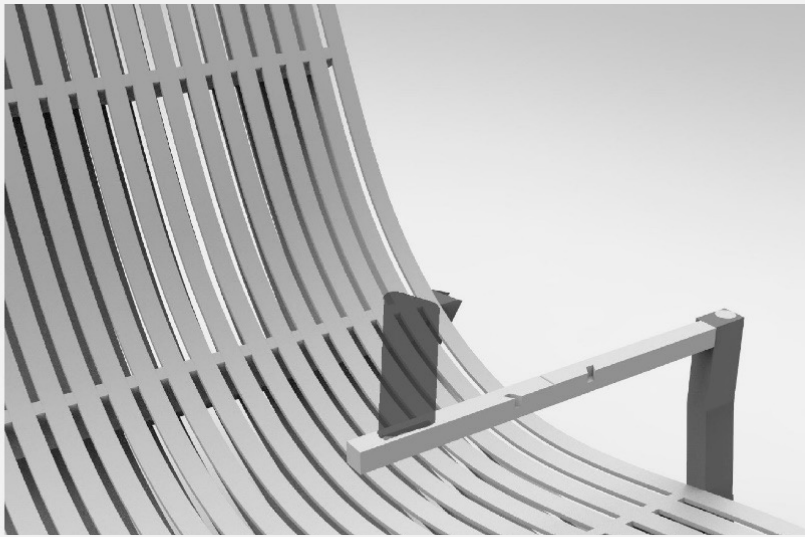
Spline Lounge – Design 2: Concept Ideation/Development



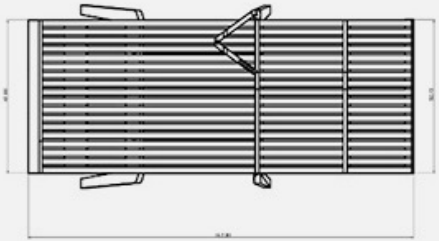
Spline Lounge – Design 2: 3D modelling/visualisation

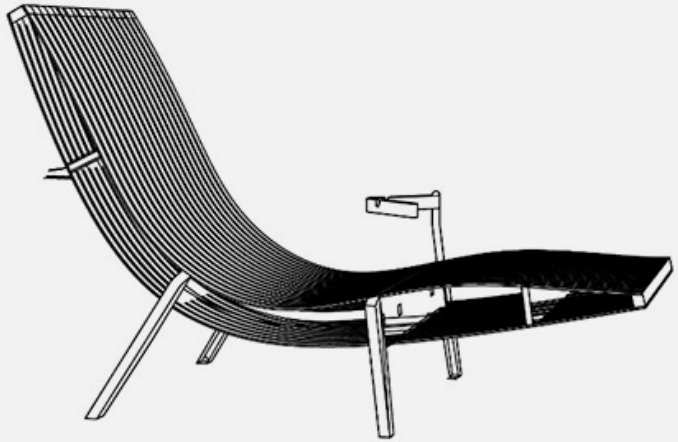
Spline Lounge – Design 2: Accessory

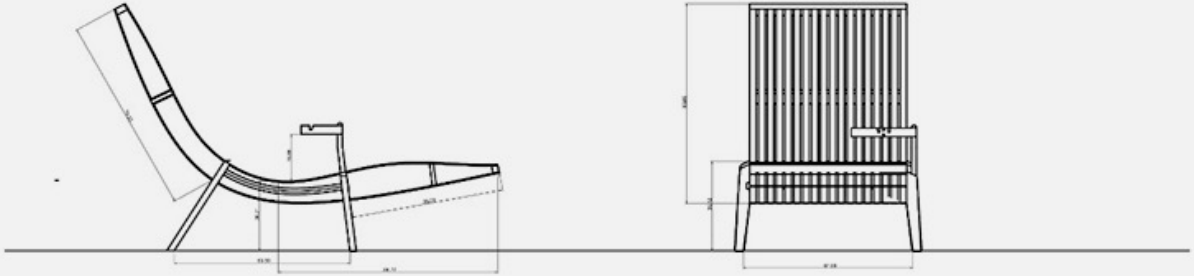




Spline Lounge – Design 2: Dimensional drawing







Spline Lounge – Design 2: Making Process

Spline Lounge – Design 2: Making Process - details

Smoke Curing

Spline Lounge – Design 2: Making Process - Prototyping

Spline Lounge – Design 2: Making Process - Prototyping

Material and Manufacturing cost of a unit (BOM):

THINK! DESIGN

Spline Lounge: Design 2 costing:

Bamboo - 24 ft. Bamboo. - 20 slivers from 2 bamboo	400/-	MS Bending and welding- 400/-	Wooden base- 5 hrs.
Pinewood	1500/-	Bamboo Bending work (2 craftsmen) - 3000/-	Bamboo bending and fixing - 2 days (8 hrs.)

Total making cost of one unit – 7000/- (approx.)

Selling Cost = Rs 16,000/-
