

This ride on toy is inspired by the **Hermit crab**. Called the **Crabuggy**, it provides a crabs point of view of the world. The limbs mounted on both the sides, mimic the movement of the crabs. The steering is provided at the natural hand resting position, to the back axle which is off centre to provide a 'wobble' experience to the ride. The buggy can hook onto another Crabuggy at the rear end to form the 'Vacancy chain'.
